

Website Development & SEO Proposal

Insurance Brokerage Website
(WordPress + Growth Plan)

Prepared by:
John Lester Ingeniero
SEO Specialist & Website Developer

Hello,

Thank you for the opportunity to work on this project. This proposal outlines a complete plan to design and develop your website using WordPress, along with a structured SEO strategy to support long-term growth.

The goal is not just to create a website, but to build a system that helps you consistently generate leads and attract agents. Everything is designed to be clean, easy to manage, and scalable as your business grows.

Project Architecture (WordPress Setup)

To ensure flexibility and long-term usability, the website will be built using a structured and reliable stack:

- **WordPress + Elementor**
A flexible and user-friendly setup that allows your team to easily update content without needing a developer.
- **Formidable Forms**
Used for lead capture and handling ZIP code inputs. It allows us to store and organize data properly from the start.
- **Structured Backend Database**
All leads and submissions will be organized in a clean format, making it easy to integrate with CRM tools later.
- **ZIP Code-Based Routing (Simple Version)**
Leads will be captured along with ZIP codes and routed appropriately without overcomplicating the system.
- **CRM-Ready Setup (Go High Level Ready)**
The system will be prepared for future automation and CRM integration without needing a rebuild.
- **SEO-Ready Structure + Performance Optimization**
The site will be built with speed, mobile usability, and search engine visibility in mind from day one.

Development Roadmap

Step 1: Agent Database Setup

We will create a structured system to store agent information, including:

- Name
- Contact details
- States covered
- ZIP codes

This will serve as the foundation for lead routing.

Step 2: ZIP Code Routing Logic

Users will enter their ZIP code when submitting a form.

The system will capture this data and use it to route leads accordingly.

For the initial version, the focus will be:

- Accuracy
- Simplicity
- Reliability

This avoids unnecessary complexity while still delivering results.

Step 3: Website Page Development

The website will include the following core pages:

- **Homepage**
Designed to build trust and guide users toward taking action
- **Services Page**
Clearly structured and optimized for search engines
- **Agent Recruitment Page**
Focused on attracting and converting potential agents
- **Contact Page**
Includes lead forms with ZIP code input
- **Thank You Pages**
Separate confirmation pages for better tracking and user experience

Step 4: Lead Routing System

Form submissions will be configured to:

- Send leads via email notifications
- Capture and organize data properly
- Prepare for future automation (Zapier / CRM integration)

This ensures you can start collecting and managing leads immediately.

5-Week Project Timeline

Week 1 – Planning & Strategy

- Project kickoff
- Structure and page planning
- User flow (client vs agent)
- ZIP routing logic definition

Week 2 – Design & Layout

- Homepage design
- Page layouts
- Mobile-first adjustments
- Review and revisions

Week 3 – Website Development

- Build all core pages
- Add content and images
- Setup navigation and structure

Week 4 – Forms & Functionality

- Create lead and recruitment forms
- Implement ZIP capture
- Setup backend data structure
- Add chat support

Week 5 – Testing, SEO & Launch

- Test all forms and flows
- Optimize mobile performance
- Apply SEO setup
- Final revisions
- Website launch

SEO Strategy & Implementation

Once the website is built, SEO ensures that people can actually find it.

What's Included:

- **Keyword Research**
Targeting your services and locations
- **On-Page SEO Optimization**
Titles, meta descriptions, headings, and structure
- **Technical SEO Setup**
Sitemap, indexing, and performance improvements
- **Location-Based SEO**
Pages targeting different states or service areas
- **Content Planning**
Strategy for blogs and landing pages that generate leads
- **Internal Linking Structure**
Improves both SEO and user experience
- **Performance Tracking Setup**
Monitoring traffic, rankings, and lead performance

SEO Execution Plan

- **Month 1:** Full setup and optimization
- **Month 2:** Content expansion and targeting
- **Month 3+:** Ongoing improvements and growth

Deliverables

At the end of the project, you will have:

- Fully developed WordPress website
- Lead generation system
- Agent recruitment system
- ZIP-based lead tracking
- Mobile-optimized design
- SEO-ready structure
- Training and walkthrough for your team

Investment

- **Website Development:** \$2,500
- **SEO Setup (One-Time):** \$1,000
- **Monthly SEO (Optional):** \$2,000

Closing

The goal of this project is to build a strong foundation first—something that works immediately and is easy to manage—while setting you up for long-term growth through SEO and automation.

This approach avoids unnecessary complexity upfront, while still giving you the ability to scale as your business grows.

If everything looks good, I'd be happy to walk you through the next steps and get started.
